

## Endurance test equipment

Anywhere where the trouble free function is crucial, special endurance test equipment is used for the thorough examination of the mechanics by means of long-term tests. Systems equipped with highly complex controls are capable of simulating up to 100,000 functions failure-free and precise.

Function test of a folding movement including documentation of the required forces.

Function test for cup holder and storage compartment

A control unit for any functions including touch screen for selection of the functional sequences and input of parameters such as times or cycle information.

Folding of a bench

Function test for cup holder
