

Double spring conveyor

The double spring conveyor provides the option of transporting your products at a 90° angle and to place them in a targeted manner. A tilting chute at the end of the conveyor belt provides for a gentle transport of the products.

The system offers high flexibility in tight spaces.

The machine operates in a product-related manner because it is equipped with a computer and step motor control as well as individual product query. Your products are positioned with millimetre accuracy at a cycle rate of up to 55 pieces / min.

This machine is mainly used in the food industry for placing soft products into packaging trays.

The system is manufactured from 1.4301 grade stainless steel and synthetic materials approved for the food industry.
