

Flow rack

The general cargo moved on a slope roll conveyor to the extraction point because of the gravity. The picking will be made at the extraction point. The charging happened from the other side of the roll conveyor and the principle "First in – First out" can be warranted.

The storage rack is made of 5 platforms each with 3 roll frames. Each platform has its own slope. The roll frames can be dismantled separately and with a wheelbase of 60 mm it also can be used for smaller packages.

Size:	1,8m * 1,8m * 1,6m
Material:	high quality steel 1.4301
Curl:	adjustable from 4 to 8%
Platform:	optional 2 to 5 pieces
Adjustable food:	for adjustment and screw of the framework

High quality steel
