

The plate placement unit TELAL-01 for continuous operation with an automatic changing function.

Product information:

**Continuous operation:** The plate placement module consists of two trolley garages. This allows the option of having a single plate type placed continuously.  
The empty dispenser trolley is changed during operation. The unit switches from the empty to the full dispenser trolley automatically.  
**Individual:** Alternatively, two different plate types can be placed.

**Hygienic:** The plates are continuously and individually removed from the plate dispenser trolley by a suction gripper arm and placed at a defined position on the tray.

Technical data:

Connected load:	ca. 2 KW
Required compressed air:	ca. 80 l / min.
Dimensions (depending on the dispenser trolley) (L x W x H):	approx. 3,400 x 980 x 1,800 mm
Output:	approx. 15 plates per minute
By request, the TELAL-01 is also available with four or six tray garages.
